The PREE 5000 program grants subsidies for energy savings actions in existing buildings. It aims for boosting sustainability with focus on municipalities with demographic challenges in Spain.

The PREE 5000 funding programme is managed by the Instituto para la Diversificación y Ahorro de la Energía (IDAE) on behalf of the Ministry for the Ecological Transition and the Demographic Challenge. IDEA coordinates and monitors the regional allocation and distribution of the budget managed by the Autonomous Communities. PREE 5000 is endowed with funds from the European Recovery and Resilience Mechanism.

PREE 5000 aims for improvement in energy efficiency and environmental protection in buildings honoring social aspects like Energy Poverty or holistic approaches. The programme focuses on municipalities with demographic challenges and up to 20,000 inhabitants. PREE 5000 support actions covering assessing, planning and investing related to:

- Improvement of the thermal envelope.
- Improvement of the energy efficiency and replacement of thermal installations,
- Improvement of lighting installations.

Applications for fundings have to be submitted via your regional Autonomous Community.
