

# AUTUMN TRAINING COURSE

## CLIMATE RISK MANAGEMENT STRATEGIES AND TOOLS FOR REGIONAL AND LOCAL CHALLENGES

 **October 11-17**  **Lisbon, Portugal**

### Why Climate Risk Management?

As a policy issue, climate change relates to four key overarching issues:

- (1) The climate is changing;
- (2) Humans are causing the climate to change;
- (3) Socio-ecological consequences are highly uncertain and contentious but include the potential for very severe impacts;
- (4) There are already multiple and well characterised policy options for Climate Risk Management, with known strengths and weakness.

Climate Risk Management refers to activities and methods used by individuals and organizations to facilitate climate-resilient decision-making. No matter what sort of organisation you work in, you will be impacted in some way by the physical effects of our changing climate and/or by the wealth of regulations and targets societies will be increasingly required to meet.

The objective of the course is to explore why managing climate change risk is important to your work and organisation, and how to do it. The course is designed for climate change practitioners dealing with the practical challenges of Climate Risk Management.

Upon application you will be asked to fill in a short problem statement telling us about who you are, what are the challenges you are facing and why you think this course can help. The course will be held back-to-back with the European Urban Resilience Forum (EURESFO) 18-20 October, Cascais, Portugal, participants to the forum are welcome to apply.

**Application deadline: 11/09 - Acceptance notification: 16/09 - Registration/payment deadline: 21/09**
